

MACHINE LEARNING

In Q1 to Q11, only one option is correct, choose the correct option:

1.	Which of the following methods do we use to A) Least Square Error C) Logarithmic Loss	find the best fit line for data in Linear Regression? B) Maximum Likelihood D) Both A and B	
	Answer: A) Least Square Error		
2.	Which of the following statement is true about A) Linear regression is sensitive to outliers C) Can't say	outliers in linear regression? B) linear regression is not sensitive to outliers D) none of these	
	Answer: A) Linear regression is sensitive to outliers		
3.	A line falls from left to right if a slope is A) Positive C) Zero	? B) Negative D) Undefined	
	Answer: B) Negative		
4.	Which of the following will have symmetric relation between dependent variable and independent variable?		
	A) RegressionC) Both of them	B) Correlation D) None of these	
	Answer: B) Correlation		
5.	Which of the following is the reason for over fi A) High bias and high variance C) Low bias and high variance	tting condition? B) Low bias and low variance D) none of these	
	Answer: C) Low bias and high variance		
6.	If output involves label then that model is cal A) Descriptive model C) Reinforcement learning	lled as: B) Predictive modal D) All of the above	
	Answer: B) Predictive Model RUD ROBO		
7.	Lasso and Ridge regression techniques belo A) Cross validation C) SMOTE	ng to? B) Removing outliers D) Regularization	
	Answer: D) Regularization		

MACHINE LEARNING

8.	To overcome with imbalance dataset which	·	
	A) Cross validation	B) Regularization	
	C) Kernel	D) SMOTE	
	Answer:		
	D) SMOTE		
9.	9. The AUC Receiver Operator Characteristic (AUCROC) curve is an evaluation metric for bin classification problems. It uses to make graph? Output Description:		
	A) TPR and FPR	B) Sensitivity and precision	
	C) Sensitivity and Specificity	D) Recall and precision	
	Answer:		
	A) TPR and FPR		
10	. In AUC Receiver Operator Characteristic (Accurve should be less.	AUCROC) curve for the better model area under the	
	A) True	B) False	
	Answer: B) False		
11.	11. Pick the feature extraction from below:A) Construction bag of words from a emailB) Apply PCA to project high dimensional data		
	C) Removing stop words		
	D) Forward selection		
	Answer:		
	B) Apply PCA to project high dimensional data		
In Q12	2, more than one options are correct, choo	ose all the correct options:	
12.	12. Which of the following is true about Normal Equation used to compute the coefficient of the Linea Regression?		
A) We don't have to choose the learning rate.			
	B) It becomes slow when number of features is very large.		
	C) We need to iterate.		
	D) It does not make use of dependent varial	ole.	
Answer A) & D)	:		

MACHINE LEARNING

Q13 and Q15 are subjective answer type questions, Answer them briefly.

13. Explain the term regularization?

Answer:

Regularization is a set of methods for reducing overfitting in machine learning models. Typically, regularization trades a marginal decrease in training accuracy for an increase in generalizability.

14. Which particular algorithms are used for regularization?

Answer:

- Lasso regression (L1 regularization)
- Ridge regression (L2 regularization)
- Elastic net (L1 + L2) regularization. ...
- Ensembling
- Neural network dropout
- 15. Explain the term error present in linear regression equation?

Answer:

The error term is the difference between the predicted and observed values of a dependent variable. It represents all the factors that influence the dependent variable that the model doesn't account for.
